Table of Contents

With that out of the way lets enter the heart of our platform, 'my lab'!

My Lab

Nested under 'mylab' are both creation tools (bootstrap) and execution tools (run).

The run menu

Inside the run menu there are three areas:

1. 'Rub lab instance'

2. 'Enter lab room'

3. the console

As the names suggest we can use the first to **run** one of our available lab instances, the second to **enter** a created labroom, and the third to **execute** scripts.
Lets look at the options one by one.
For the purpose of this walkthrough 'testmpi2' and 'test 18' were created.
Since the console is explained along with the first area we dont feel there is a need to have seperate walkthrough.

Run lab instance area

Unresolved directive in my_lab.adoc - include::../.{sourcedir}/navigation/lab_instances.adoc[]

Enter lab room area

Unresolved directive in my_lab.adoc - include::../.{sourcedir}/navigation/lab_rooms.adoc[]
