

Create Network, Build app, share it

Table of Contents

share/deploy app 1

Collaborating with team members and other developers

Personalize developer access to your apps

Deploy your applications in separate networks independently and in different target groups

Figure 1. deploy

share/deploy app

The process to share your application consists of the following steps:

- Create a Virtual Network (*Venus service*)
- Select ready to use labrooms/microservices or make your own (*hybrid service*)
- attach app to network (*hybrid service*)
- invite users to join you brand new app (*venus service*)

Thats all folks!
