Table of Contents

'Bootstrap Labroom'

Now lets see how we can bootstrap a new labroom using one of our lab instances.
To do that lets navigate to the respective tab that should look like this:

[bootstrap labroom] | *{imagesdir}/for_tutors/bootstrap_labroom.png*

Here we can select the desired (existing!) lab instance that will be used to create the labroom using the plug icon [plug icon].

[lab instance choose] | *{imagesdir}/for_tutors/lab_instance_choose.png*

Then we have to specify starting date and time and also set the duration for which our lab room will be open.

[timeframe selection] | *{imagesdir}/for_tutors/timeframe_selection.png*

CAUTION	You can only start a labroom every whole or half hour (p.e. 12.00 or 14.30) and never inbetween so please plan ahead!! Also note that the duration cannot be greater than three hours since we consider that the maximum for any type of lesson!

Now using the searchbar that follows (you HAVE to search for students for them to come up) we search and select ([plug icon]) the students that we want to invite to the lesson.
Note that only students that have subscribed to our labroom will be available for invites to avoid confusion!

[student selection] | *{imagesdir}/for_tutors/student_selection.png*

After selecting all the desired students we have to fill in the last details at the bottom of the page. Please give concise titles and good descriptions to your labrooms!!

[bootstrap details] | *{imagesdir}/for_tutors/bootstrap_details.png*

Now we shall check and upon making shure that everything is right we click the 'bootstrap your lab' button!

WARNING	Bootstraping is final and no further edits are allowed!!
