

# Swarmlab Hybrid!

## Table of contents

1. Start/Stop Agent .....	1
1.1. Start Agent .....	2
1.2. Stop Agent .....	2
2. Config .....	2
3. Deploy .....	2
3.1. Private/Local .....	2
3.2. Hybrid .....	3
4. Join .....	3
5. Connect to Container .....	3

*Build once, Deploy anywhere!*

Swarmlab Hybrid provides a **Modern Application Architecture**

- Distributed System
- Multiple machines
- Each service is a process
- Containerized services in Lightweight containers
- Auto deploy/delivery of services

*WireGuard - fast and modern VPN tunnel*

**All running in a isolated Network Stack with High efficiency and security**

## 1. Start/Stop Agent

## 1.1. Start Agent

- Navigate to the dir you have installed the agent
  - run `./start.sh`

## 1.2. Stop Agent

- Navigate to the dir you have installed the agent
  - run `./stop.sh`

## 2. Config

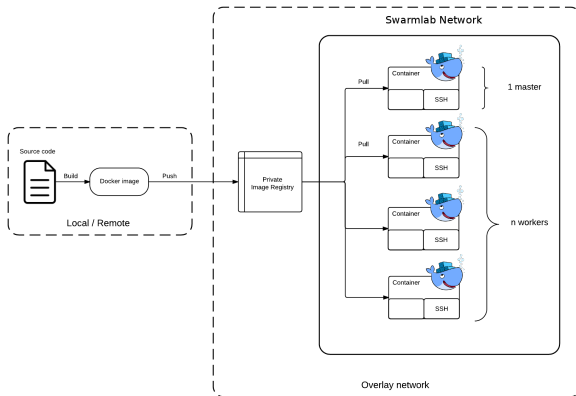

- Use the "Profile → Settings" menu on `swarmlab-agent` client to configure a hybrid agent
  - click on "Load Settings" 1st
  - add also a zone for your agent

## 3. Deploy

### 3.1. Private/Local
